STAIN REMOVAL SYSTEM

FOR ALL TYPES OF STAINS AND ALL TYPES OF LINENS

SRS

Laundry Spotter Program

The Sunburst Stain Removal System (SRS)...

SRS is an easy and low-cost way of effectively fighting laundry stains that were previously too difficult and too costly to remove.

Using Sunburst SRS can save many dollars in linen replacement and undo the harm from washing linens too hard just to remove difficult stains from a few items.

Effective stain removal is an important part of maintaining quality linens. The Sunburst Stain Removal System (SRS) was developed to assist laundry operations by keeping linens in circulation without damaging fabric, while maintaining a safe environment. This three-part system effectively fights stains that were previously too difficult to remove. It is the answer to removing the toughest stains without damaging fabrics.

Most wash formulas today are designed to remove ordinary soils under general stain conditions. Rewash formulas are often damaging and result in shorter linen life. SRS returns linens to first-class service for a fraction of the cost of linen replacement.

The Sunburst SRS consist of three stain-removing products, each with distinctive stain-removal properties.

- 1 SR1** is an oil-based formula for removing oil-based stains. Environmentally friendly, it contains no hazardous chemicals. Use it before or after the washing process for quality results. Included is a red trigger sprayer head.
- 2 SR2** is a general-purpose spotter used for removing a broad spectrum of stains. Environmentally friendly, it is save and easy to handle. Included is a green trigger sprayer head.
- 3 SR3** is a concentrated product for removing rust and iron stains. It contains no hydrofluoric acid, is safe to use, and is environmentally friendly. Included is a yellow flip-top cap.

SRS Starter Kit

In addition, Sunburst offers an SRS Starter Kit. This kit consists of two 28-ounce bottles of SR1, one 28-ounce bottle of SR2, and one 28-ounce bottle of SR3. One red and one green trigger sprayer head along with a color-coded wall chart are also included. The SRS Starter Kit is an essential tool for on-premises laundries.

... A **Complete** Laundry Stain Removal System

Choosing the Right Product for the Job

Using the Sunburst SRS is fast and easy. Simply follow these steps for selection of the right product:

1. Identify the type of stain to be removed.
2. Select the spotter that removes the identified stain or stains.
3. Refer to the chart below to best match the stain to the correct spotter.

SR1

An oil-based laundry spotter for the removal of oil-based stains. Aids in the removal of the following types of stains:

Collar Cuff	Lipstick	Oil	Tar
Cooking Oil	Lotions	Ointments	Wax
Gravy	Make-up	Salad dressing	
Grease	Mascara	Shoe polish	
Inks	Nail polish	Suntan lotions	

SR2

This laundry spotter covers a broad spectrum of stains. It aids in the removal of the following types of stains:

Beverages	Coffee	Ketchup	Wine
Blood	Collar & cuff	Liquor	Vomit
Candy	Food	Perspiration	
Chocolate	Ground in soils	Tanin	

SR3

This is a rust and iron removing spotter. It's a concentrated product that removes iron stains from laundry linens.

Benefits of the Stain Removal System:

- Is a complete set of chemicals to use for specific laundry stain problems. Everything needed is in one system.
- Three products solve all stain problems — instead of four or five or more.
- Spotters are packaged ready-to-use. No mixing is necessary, so formulas can't be misused or cause harm to linens.
- All products are color coded for easy identification and use, which also aids in training personnel.
- A wall chart is included for proper training and use of each spotter.
- Chemicals contain no dyes that could stain fabrics.
- Chemicals are biodegradable and contain no harmful ingredients.

Using the Sunburst Stain Removal System saves chemical dollars, energy dollars, wash formula time, linen replacement cost and labor cost.

Making
laundrying
easier and
less costly
while
maintaining
quality linens
is what SRS
is all about.

Savings Received Using the Sunburst Stain Removal System:

- \$\$ All SRS spray spotters are designed to save time by applying the product to the fabric when checked during folding. Linen can be set aside to activate removal of the stain, then simply rewashed in a normal wash load.
- \$\$ The average cost of treating a stained piece of linen with a selected product is five cents or less. The average cost of a piece of linen is \$7.50 per pound. The savings in linen purchases can be very substantial over a year's time.
- \$\$ Using an SRS spotter can save on wash load chemical cost. Knowing that only a small percentage of linen is actually stained going into the washer, it becomes most cost-effective to clean, brighten and sanitize the load. Any remaining stains can be treated as mentioned above at a very low cost per stained item.
- \$\$ Using an SRS spotter can save time and energy. Unlike long and harsh chemical formulas in the washer which slow production while trying to remove stains and which generally don't work anyway, a spotter program that is set up properly will wash all linens to 98 percent and wash time, water use, sewer costs are all substantially reduced. Shorter wash time means less tensile strength loss of the linens and faster turnaround of the laundrying process.
- \$\$ Most on-premise laundries have a need to wash their linens quickly, so that they can resupply their rooms. Most often the saving in wash program time can be 15 to 20 percent. This means that in a normal 8-hour day each washer can produce an average of 1.5 additional loads. This is a tremendous savings in labor and linen inventory.

Ordering Information

Product	Item #	Pack Size
SR1	#79651	4x28 oz./case (includes 1 red trigger sprayer head)
SR2	#79652	4x28 oz./case (includes 1 green trigger sprayer head)
SR3	#79653	4x28 oz./case (includes 1 yellow flip-top cap)
SRS Starter Kit	#79654	4x28 oz./case (2 28 oz. of SR1, 1 28 oz. each of SR2 & SR3) (Includes 1 red & 1 green trigger sprayer head and a Wall Usage Chart)
